KILOMETRES

Compiled by Krapf C.B.E. (Geological Survey of South Australia) with contributions by Morris B.J., Davies M. and Hough J.K. (Geological Survey of South Australia). Incorporating information from Mineral Deposits Database (MINDEP) and geological mapping from SA Geology. GIS and cartography by Ragless J.E. (Spatial Information Services) and Irvine J.A. (Geological Survey of South Australia).

Topographic detail based on information supplied by SA Department of Environment, Water and Natural Resources. The relationship between this data and DSD data is not guaranteed.

A product of PIRSA Spatial Information Services.

September 23, 2016

REFERENCE

MINERAL RESOURCE POTENTIAL
South Australian Mineral Resource Potential Mapping translates geological mapping, current productive mineral tenement locations and a range of other resource information into a 3 level categorisation of resource potential and suggested planning response as below.

CATEGORY 1 - HIGH MINERAL POTENTIAL & /or Current Operation
Full planning protection required from incompatible development. Important mineral resource area. Current mining operation, current mineral tenement, Extractive Industry Zone, known economically viable mineral resource/reserve established by drilling, trenching etc. or high potential for resource/reserve although full investigation to resource/reserve status not yet undertaken.

CATEGORY 2 - MEDIUM MINERAL POTENTIAL
Mineral Potential should be considered in planning. Further consultation or investigation before incompatible development allowed. Moderate to good geological potential for significant resources known from preliminary geological studies but investigation required to establish resource and economic viability.

CATEGORY 3 - LOW MINERAL POTENTIAL
No specific planning protection required. No or very minor known mineral resource potential based on current information. May include some sources of construction material eg fill or other low specification material for local use from pits operated by councils.

Changes in mineral resource market requirements, in geological knowledge and information and in exploration techniques may significantly alter the mineral potential categories applicable to areas. The latter two factors are particularly relevant to the potential for metallic minerals.

South Australian Mineral Resource Potential Mapping is discussed further in MESA Journal 59 : 13-15.

MINERAL RESOURCE POTENTIAL - COMMODITIES

- Category 2 - Copper
- Category 2 - Sand
- Category 2 - Salt
- Category 2 - Quartzite
- Category 2 - More than 2 Commodities
- Category 3 - No or little known resource potential

MINES AND OCCURRENCES (MINDEP)

- Mine
- Occurrence
- Quarry

LABELS

Metasiltstone	Commodity
Dimension Stone	Uses
Rosedale Quarry	Major Resource Area

DISCLAIMER
This mapping product is designed to assist land use planning and is **not suitable for use in mineral resource investment decisions**. Many areas categorised as having mineral resource potential do not have sufficient drilling or other information to define resources or reserves to mineral industry (JORC*) standards. The mineral resource potential information is largely interpretative in nature and is based on information available at the time of compilation. New information or further interpretation of existing information may significantly change the assessments of mineral resource potential shown on this map.

The Joint Ore Reserves Committee of the Australasian Institute of Mining and Metallurgy, Australian Institute of Geoscientists and Minerals Council of Australia. The JORC Code is the Australasian Code for reporting of Exploration Results, Mineral Resources and Ore Reserves

CURRENCY OF INFORMATION
Mineral tenement locations and mineral resource potential information may have changed since production of this map on 23 September 2016.

Current tenement information is available online through the DSD SARIG site at www.sarig.pir.sa.gov.au
